CytoSorbents Cp (CTSO-OTCBB)

CTSO: Record Product Sales and Total Sales. Potential New Indication in MERS

Current Recommendation	**Outperform**
Prior Recommendation	N/A
Date of Last Change	06/04/2012
Current Price (05/16/14)	$0.23
Target Price	**$0.50**

OUTLOOK

CytoSorb was CE Marked in March 2011 and subsequently commenced its initial commercialization. Initial focus on building awareness appears to be paying off. CTSO now generating clinical outcomes data which is just starting to be used to accelerate adoption and utilization. Mgmt outlined a multi-point plan on Q4 call to use recent cash raise to further accelerate sales as well as generate additional clinical data and build awareness. CTSO now expects to pursue cardiac surgery indication in the U.S. as this may provide the lowest cost, easiest and fastest route to the U.S. market. Cardiac surgery indication has driven substantial interest overseas with successful outcomes. Gov't contracts/grants that CTSO continues to score should benefit near-term revenue and cash flow as well as also aid their awareness-building efforts, further increase visibility and credibility of the technology, and potentially expand the menu of potential applications of the device. Interest in and use of CytoSorb from key opinion leaders continues to increase.

SUMMARY DATA

Q1 Financials, Business Update

Q1 Financials: Record Product Sales, Record Total Revenue. Potential New Indication in MERS…

CytoSorbents reported results for the first quarter ending March 31, 2014. Both product revenue and total revenue were at all-time highs and are reflective of the continued progress with the roll-out of CytoSorb. Product sales have now increased on a sequential basis every quarter except one since Q3 2012 (i.e. - 5 of the last 6 quarters). Strong re-order volumes have been a catalyst to the product sales growth and, per management's comments on the call, this trend has continued through to the current quarter. CTSO also had the best quarter in terms of adding new accounts in Q1 - as the account base continues to grow with expansion of the sales force, we would expect an even greater rate of re-order volume growth. The company recently beefed-up its sales force, adding two more reps in February and expects to grow this further throughout the current year. Management noted on the call that the majority of sales in Q1 2014 were direct sales - indicating that growth in the sales force is having a direct benefit on growth in product revenue.

And while there's still potential to see some quarterly volatility, we think it is now clear that follow-on orders from existing customers (where the majority of orders are coming from – which we view as particularly positive), use of CytoSorb in an expanded number of critical care applications and in broadening of the geographic commercialization footprint are all contributing to the consistent sequential revenue growth. Awareness-building, clinical data and case studies outlining successful interventions with CytoSorb has been at the heart of CTSO's sales efforts, the fruits of which are being seen in the consistent product revenue growth. CTSO will continue to build on this throughout 2014 and with the launch of the patient registry documenting real-world successful interventions with CytoSorb, the bulk of clinical evidence will continue to grow which should further enable the marketing message.

Q1 total revenue was $1.06M, up 186% yoy and +21% sequentially. Product sales of $569k represented yoy and sequential growth of 223% and 81%, respectively. Grant revenue was $493k in Q1. We expect additional grant revenue to be booked during the year from the DAPRA grant and Phase II SBIR contract. CTSO also has yet to bill anything under the USAF funded rhabdomyolysis study, valued at about $3M, and which just recently commenced.

The company did not disclose the specific product gross margin but did note that it exceeded 60% - product gross margin was 61% in Q4 which was what we have modeled for most of the current year. Total gross margin, which is less reflective of the core business and is impacted by grant-related R&D expenses being captured in COGS, was 38% in Q1 and was better than our 31% estimate. Q1 operating expenses were $1.6M compared to our $1.4M estimate - the difference mostly related to headcount additions during the quarter as CTSO has added headcount in the expansion of their sales force and support functions with the expanded roll out of CytoSorb. Clinical/scientific staff has also been recruited to oversee clinical trials in Europe and for development of a cardiac surgery trial in the U.S.

Q1 net income and EPS were ($2.1) million and ($0.01), compared to our ($1.7) million and ($0.01) estimates. Approximately $500k of the difference in net income is the result of an increase in non-cash preferred stock dividends (paid in-kind) - the increase a result of the recent significant increase in the value of the preferred shares. Cash used in operating activities was $800k in Q1. Cash balance, which stood at $6.4M at the end of Q1, was bolstered by the $10.2M (gross) capital raise in March.

MERS / Aggressive Flu Strains A Potential New Opportunity…

CTSO announced their latest distribution agreement, with Techno Orbits for the Middle East, in early April. Techno Orbits' territory covers Saudi Arabia, the UAE, Kuwait, Qatar, Bahrain and Oman (i.e. - the GCC territory). While CytoSorb is still awaiting product registration for the Middle East, management hopes to have this in the near-term.

Techno Orbits will distribute the device for any and all indications in which it is appropriate but CytoSorbents believes there is a somewhat unique opportunity for their product in this part of the world. Middle East Respiratory Syndrome Coronavirus, or MERS, is an aggressive and often deadly virus thought to be linked to camels and/or bats. MERS has only recently been discovered with the first reported case in 2012. And while there have only been less than 600 reported cases, contraction of the virus can be very serious and has a mortality rate of approximately 25%. The virus is aggressive and causes acute pneumonia, sepsis and organ failure. Management noted on the call that discussions with Techno Orbits and a hospital in Saudi Arabia that is focused specifically on treating MERS, that the Middle East is taking this threat very seriously.

CytoSorb has yet to be used on a MERS case, although it has been successfully used on a number of patients with viral sepsis and influenza - symptoms of which, including an immune response that results in rapid elevation in cytokines, is similar to that of MERS. On the call management detailed a case of a patient admitted to the ICU with severe swine flu and kidney failure as an example of the utility of CytoSorb in treatment of aggressive flu strains. CytoSorb was able to rapidly drop interlukin-6 cytokine levels over several days - the patient was discharged within two weeks and remained well at 60 days.

The potential opportunity could very well expand beyond MERS and springboard to include aggressive flu strains that can be increasingly difficult to treat and have relatively high mortality rates. Clearly, however, once product registration has been accomplished, MERS will almost certainly be of significant interest for the CytoSorb in the Middle East as there is currently no specific treatment for the virus. This could potentially open up an even broader use of the device in the near future.

Putting The Cash To Work…

A key topic on the recent conference calls was that CTSO will be putting the recent cash raise to work in specific areas to add another layer of growth. This includes additions to the sales force (particularly for the German market), additional distribution agreements (up to 5 more distributors in 2014) and partnerships, hiring of support personnel to help communicate the clinical successes of CytoSorb, adding to their clinical support staff and generation of more clinical data. Repeated was the message that they will be discerning in expanding geographically and will focus on areas that accept the CE Mark and with favorable reimbursement. Case reports of positive patient outcomes and additional clinical data is expected to help facilitate sales efforts within their existing footprint and will support efforts to establish reimbursement in countries that CTSO may look to enter.

CTSO also will look to use the funding to initiate a U.S. study for CytoSorb – not in the previously expected application for sepsis, but instead for cardiac surgery. Dr. Chan laid out a compelling case for the reasons to pursue cardiac surgery (an application where CytoSorb has already had documented successes overseas) instead of sepsis in the U.S. – which we discuss further below.

CTSO Expects a Busy 2014…

- **Beefed-up distribution:** as of the end of Q1 2014 CTSO had six distributors (covering parts of the UK, Ireland, The Netherlands, Turkey, Russia and the Middle East) plus the partnership with Biocon covering India. CTSO expects to add up to five distributors in 2014 (including Techo Orbits which was added in April) in areas of the world (ex-Germany where they have a direct sales force) that accept the CE Mark (which is essentially all of Europe as well as other areas of the world).

  CTSO will also look for other partnership arrangements similar to the one with Biocon, a relationship that appears to be mutually beneficial. In fact Biocon noted on their Q3 2013 earnings call (Jan. 23, 2014) that, “Our recent launches Alzumab and CytoSorb have done extremely well, with strong uptake from both doctors and patients.” Biocon appears to be solidly behind promoting CytoSorb, both from the clinical evidence side as well as feet on the ground. CTSO noted that Biocon will create a dedicated sales force for CytoSorb which will be focused on building awareness and educating physicians on use of the device. Biocon will also be setting up a patient registry and use case studies in promotion of the device and to develop manuscripts. We think additional partnerships similar to the one with Biocon can add meaningfully to CTSO’s results.

- **Beefed-up sales force:** as of the end of 2013 CTSO had four sales people selling direct in Germany, Austria and Switzerland. With just this skeleton crew, CTSO was able to ramp product sales to more than $800k in 2013 and established a presence with more than 100 key opinion leaders. CTSO added three more reps (for a total of seven) through mid-May and expects to increase the sales force to 10 reps by the end of 2014. Management noted that the majority of sales in Q1 2014 were direct sales - indicating that growth in the sales force is having a direct benefit on growth in product revenue. The direct sales force will continue to have a majority focus on Germany. And with cardiac surgery now a major focus (as is sepsis), CTSO has recently hired reps with contacts specifically in the cardiac surgery space.

- **Drive utilization:** CTSO first outlined their general plans to increase adoption and drive utilization last summer. Noting that while their initial sales strategy had focused almost exclusively on "cast(ing) a wide net" to broaden awareness and get hospitals and doctors interested in the device, that they would now also place a greater emphasis on penetration within the critical departments which have already been introduced to the technology in order to increase adoption and utilization. CTSO has indicated that they have already had successes in this regard – where CytoSorb may have been introduced to a particular hospital by a KOL and used in his or her

intensive care specialty, but is now being used by other intensive care units within the same hospital. In addition, they continue to see growth in re-orders, indicating that adoption has been "sticky."

- **Expanded Indications:** CytoSorbents continues to look to expand the application of CytoSorb to additional indications. It has already been used successfully in sepsis, cardiac surgery, trauma, burn injuries, aggressive flu strains, trauma and others. The company is now investigating use in MERS, an aggressive and often fatal virus, most common in the Middle East. CytoSorbents also sees severe liver disease as a potentially attractive opportunity. As the more indications that the device is successful in treating, the potential applicable total target markets will continue to expand.

- **Clinical data:** clinical outcomes data has been a driving force in accelerating product sales. CTSO will dedicate more resources towards additional studies and expects to have a regular flow of outcomes data coming from the various investigator initiated studies. A patient registry, case studies (Dr. Chan has highlighted several successful outcomes when CytoSorb was introduced with critically ill patients) and additional support personnel to help communicate the successes of CytoSorb along with presentations and publications will all be major focuses in 2014 to build awareness, drive adoption, increase sales and to support reimbursement.

  Approximately 30 investigator initiated studies are ongoing as is the sepsis dosing study. In late December CTSO announced preliminary results from the dosing study. Results showed no serious device-related adverse events and demonstrated removal of cytokines throughout the 24hr treatment period in the 28 patients enrolled in the 24hrs/7days treatment arm. The other treatment arm (6hrs/up to 14 days) is currently enrolling patients. Assuming positive results, CTSO game plan now is to move to a larger study in sepsis in Germany.

  Among the 30 investigator initiated studies, 11 relate to cardiac surgery. CTSO expects two of these controlled studies to be completed by Q3 (or earlier) of this year. Six other studies are using the device in septic shock, severe sepsis and lung injury – one of which should also complete this year. The other studies include patients with liver disease, trauma, burn injuries and acute pancreatitis. Data from these studies offer potential catalysts that can positively impact the marketing message and rate of adoption and utilization of CytoSorb.

- **Presentations, conferences, user-meetings:** another key to CTSO's awareness-building efforts have been attendance and presentations at industry conferences. This will be an ongoing focus. Recently CTSO held its first Users Meeting at the DIVI conference in Germany which allows attendees to hear success stories directly from users the device. Comments at the Users Meeting included that physicians could "see the therapy turning the patient around". CTSO noted that they have had impressive attendance at presentations at recent industry conferences and recently exhibited/attended at eight major international healthcare conferences.

- **U.S. study:** CTSO previous game-plan relative to the U.S. market was to use the European sepsis dosing trial data as support for FDA approval to run a sepsis trial in the U.S. On the Q4 call, however, CTSO said that they are now focused on running a pivotal trial in the U.S. for cardiac surgery. The reasons for focusing on cardiac surgery include the demand (and clinical successes) that CytoSorb has had in that application in Europe and CTSO believes cardiac surgery represents a faster regulatory approval timeline and will be lower cost and have less risk of failure than a sepsis related trial. For one, CTSO noted that outcomes are more predictable with cardiac surgery than with sepsis. Also, mortality will not be an endpoint in cardiac surgery – whereby it is with sepsis and is a relatively high hurdle. The cardiac surgery focus for the U.S. makes sense in that it is a relatively lower-risk endeavor and can get CytoSorb's foot in the domestic door – the company can then focus on expanding the label to encompass additional indications. It also likely puts the device on the U.S. market and generating revenue here earlier than would have been the case if CTSO had pursued sepsis as the initial indication.

  In addition, while there are currently blood-filtration products on the market that are used during cardiac surgery to reduce inflammatory substances, they do not target cytokines – which offers CytoSorb a wide-open market opportunity. While cardiac surgery was barely mentioned just 18 months ago, this seems to have quickly become a major driver of demand and interest in CytoSorb – with CTSO noting that 22 cardiac surgery centers have either used the device or expressed interest in doing so – this is up from just 10 in 2013. CTSO also indicated that based on interest that they've seen for the cardiac surgery application that specifically changed some of their sales efforts to dedicate more focus on cardiac surgery.

  And while the market for cardiac surgery, at approximately $500M in the U.S.(per CTSO estimates), is likely significantly smaller than for sepsis (potentially 1+billion dollars), it still represents a relatively large target market. And, again, the company would likely look to expand the label in the U.S. beyond just cardiac surgery. CTSO has yet to provide much in the way of specifics relative to the near-term game plan for a U.S. cardiac

surgery trial, although did note that they will be hiring a Chief Scientific Officer to manage the U.S. trial (as well as European studies), just recently recruited a Cardiac Surgery Advisory Board and began drafting the protocol for the study. The cardiac surgery clinical data generated overseas might be used as support to petition U.S. regulators to initiate a clinical study in this country.

- **Partnering for other products:** CTSO had mentioned on prior calls that they would look for partners for commercialization of some of their other products – these include HemoDefend (blood purification and storage), ContrastSorb (prevention of CIN), and DrugSorb,(drug detox and overdose) as well as four or five other products that are in the pipeline. This will be an ongoing focus in 2014. CTSO is focused on what they termed "de-risking" these products to make them even more attractive to potential commercialization partners – which includes making enhancements to the products. Further de-risking of HemoDefend may also come from the ABLE (Canada) and RECESS (U.S.) pivotal studies. The studies are attempting to determine whether aged blood may be potentially more toxic than new blood – data from these could be available during the year – and could potentially provide support for use HemoDefend to keep blood fresh. CTSO recently noted that they have confirmed the regulatory pathway in both the U.S. and E.U. (although mgmt. did not elaborate) for the in-line filter HemoDefend product.

Recent operational highlights include;

COMMERCIALIZATION

- Direct sales of CytoSorb commenced in Germany, Austria and Switzerland
- CTSO posted record product sales in Q1 2014 of $569k. Guidance continues to indicate continued yoy growth. Seeing more hospitals as well as more departments within hospitals using CytoSorb. Direct reps continue to score more accounts. As sales force has grown, so have product sales.
- Distribution agreement signed with Techno Orbits in April 2014 for Middle East. Could have real opportunity with CytoSorb in MERS following requisite product registration in Middle East
- Distribution agreement with Biocon, Ltd signed in Q3 2013. Biocon is largest biotech in India. Affords potential to market Biocon's antibiotics with CytoSorb as a total treatment for sepsis (sort of a one-two punch) in that country. Revenue contribution from Biocon started in Q4 2013. Biocon appears strongly behind CytoSorb and noted on their Q3 2013 call that CytoSorb sales have been very strong.
- CTSO beefed up their internal sales force from 4 (at end of 2013) to 7 currently. Will look to add 3 more by year-end 2014. Both cardiac surgery and sepsis are major focus points as its driving adoption and utilization to different depts within a hospital.
- Distribution agreement with WMC Medical for Netherlands signed in October 2013
- Agreement penned in May 2013 with L.IN.C Medical Systems to distribute CytoSorb in the U.K. and Ireland. In June CTSO signed agreement with Hiti Medical Systems for distribution in Turkey. In November 2013 signed agreement with INTENSIVMED for distribution in Russia
- International expansion via additional distribution agreements is a major focus for 2014 - looking to add a total of 5 distributors in 2014
- $10M capital raise in early 2014 being used to beef-up distribution and the direct sales force, increase the amount of clinical data and case study reports, increase overall awareness building, build out the patient registry and initiate plans for a U.S.-based cardiac surgery study as well as move forward with a sepsis study in Germany

VALIDATION / REGULATORY

- In June 2013 the FDA approved the first U.S. based human study of CytoSorb in critically ill patients - a significant milestone in our opinion
- CTSO recently noted that about 150 (up from 100 in just the last few months) key opinion leaders (KOL) are either using CytoSorb, want to use it or are planning to use it in clinical trials. As of May 2014 there were 30 investigator initiated studies, some of which are expected to complete in 2014. These studies run a wide gamut of medical complications including cardiac surgery, sepsis, trauma, surgery, pancreatitis, organ failure and acute respiratory failure.
- Relative to cardiac surgery, this has quickly become a high-potential indication. 11 of the investigator initiated studies relate to cardiac surgery. Demand is coming specifically for this indication. Positive patient outcomes in cardiac surgery should further catalyze this opportunity. Two recent sales rep hires have specific contacts in the cardiac surgery space. CTSO announced in March 2014 that instead of pursuing a pivotal study in sepsis in the U.S., that they will now pursue cardiac surgery.

- Dosing study (Europe) ongoing with more patients being enrolled. CytoSorb has been used for up to 24 hours over 7 days with no serious device related events reported and showed reduction in cytokines over the full 24-hour treatment period. Other arm (6hrs/up to 14 days) is now enrolling. We could see add'l data from this study in 2014. CTSO will expand the study to ten leading hospitals in Germany (currently 8). Data from the study is expected to be used to further supplement the data from the European Sepsis trial. CTSO expects to initiate a larger sepsis trial in Germany.
- CTSO recently noted that a number of case study reports have been borne from ongoing studies. The first published in Blood Purification in July 2013. Most recent was published in April 2014 in International Journal of Artificial Organs detailing succesful use of CytoSorb in near fatal case of necrotizing fasciitis. Others are being prepared and expected to be published in near-term. CTSO just established a patient registry where case studies and clinical outcomes data will be kept - this is expected to go live in June of this year
- Initial feedback from physicians using CytoSorb in clinical practice with critically ill patients, including those with septic shock, cardiac surgery and multiple organ failure (which includes the initial indications addressed by CytoSorb), have been encouraging with outcomes including a dramatic reduction in IL-6 levels (which was also an endpoint in the European Sepsis Trial), stabilized organ failure, and patient recovery. Feedback at first Users Meeting held in December 2013 offered further evidence of efficacy - comments included that physicians could "see the therapy turning the patient around".
- Will now pursue cardiac surgery as the initial indication in the U.S. instead of sepsis. CTSO believes cardiac surgery makes more sense as it represents a faster regulatory approval timeline and will be lower cost and have less risk of failure than a sepsis related. Once FDA approved, the game plan will be to expand the label to include other indications.
- Initiation of work under the Phase II Small Business Innovation Research grant from the U.S. Army, worth up to $1 million. Initial revenue recorded for this grant in 2013
- Awarded Phase I grant from NHLBI for HemoDefend worth $203k in September 2013.

AWARENESS-BUILDING

- Presentations, exhibitions and research talks at several scientific meetings. Anticipate this will continue and will also be supplemented by presentations by key opinion leaders which are using CytoSorb
- The company attended and presented at several key industry conferences in 2013 as well as in Q1 2014 in both the U.S. and throughout Europe (including Germany, France and Austria). The company held its first ever Users Meeting at the DIVI conference in Germany in December 2013. Feeback was positive. CTSO also presented at the DIVI meeting, noting strong attendance and significant interest in CytoSorb. CTSO also recently sponsored a research symposium at the International Symposium on Intensive Care and Emergency Medicine where doctors discussed intervention with CytoSorb in various critical care illnesses
- Two abstracts were accepted for presentation at the German Sepsis Society meeting in September. One, from the University of Ulm, Germany related to the first successful fungal sepsis case treated and, the other, from Trauma Hospital in Linz, Austria for the treatment of a septic shock patient with liver cirrhosis. The patient registry and ongoing investigator studies are expected to begin to produce data for a regular flow of manuscripts and publications. This is expected to be a facilitator in increasing adoption and utilization

- **PIPELINE**
    - HemoDefend: refined the filter which now allows a unit of blood to flow through in under a half-hour, within the requirements for blood transfusions. CTSO now working to reduce unit production costs including optimizing packaging. CTSO noted on the Q4 2013 call that they have confirmed the regulatory pathway in both the U.S. and E.U. (although mgmt. did not elaborate) for the in-line filter HemoDefend product
    - In August 2013 Dr. Chan made a presentation on HemoDefend at the Military Health System Research Symposium
    - Beads in a Bag: progress continues towards eventual commercialization. Beads in a Bag technology was the subject of CTSO's poster presentation at the 2012 American Association of Blood Banks conference
    - NHLBI grant provides add'l funding to progress development of HemoDefend and also provides add'l validation of the technology
    - CTSO indicated there is real interest in HemoDefend from potential partners, for both the Beads in a Bag as well as in-line filter configuration
    - ContrastSorb: CTSO's most recent pipeline candidate is being designed to prevent contrast-induced nephropathy (CIN), a condition that patients with compromised kidney function are susceptible to when undergoing procedures that require use of a contrast agent such as image-guided cardiology and certain radiology procedures. CIN has been estimated to be a ~$500 million/yr market. Current

standard of care to address CIN, which is essentially indiscriminately flushes the contrast agent from the body, is often times ineffective. CTSO believes their ContrastSorb technology may be a more effective option to remove contrast agents from these high risk patients

OUTLOOK / RECOMMENDATION / VALUATION

We model a sequential uptick in revenue throughout 2014 as near-term catalysts, including several of those that management outlined on the recent conference calls, make an increasing contribution over time. And while there's still potential to see some quarterly volatility, we think it is now clear that follow-on orders from existing customers (where the majority of orders are coming from – which we view as particularly positive), use of CytoSorb in an expanded number of critical care applications and in broadening of the geographic commercialization footprint are all contributing to the consistent sequential revenue growth. Awareness-building, clinical data and case studies outlining successful interventions with CytoSorb has been at the heart of CTSO's sales efforts, the fruits of which are being seen in the consistent product revenue growth. CTSO will continue to build on this in 2014 and with the launch of the patient registry documenting real-world successful interventions with CytoSorb, the bulk of clinical evidence will continue to grow which should further enable the marketing message.

Our modeled revenue in 2014 and beyond includes mostly sales of CytoSorb (with a relatively small % contribution from contracts/grants). Assuming positive results from company-sponsored and investigator-led studies as well as supportive feedback from hospitals and critical care professionals, we think 2014 could be more of an inflection point for CytoSorb and mark the beginning of a significantly greater ramp in commercial sales. On the Q4 2013 call management indicated 2014 revenue could be multiples of that generated in 2013.

Based on the current ambiguity relative to what the FDA will be looking for to support a potential future PMA submission and the real risk of delays, we do not incorporate any contribution from sales of CytoSorb in the U.S. prior to 2018. However, management's recent decision to focus on a cardiac surgery indication instead of the previously expected sepsis indication, may provide an easier, lower cost and quicker time to FDA approval. We look forward to hearing more about CTSO's plans for initiating a U.S.-based pivotal study. We will update our assumptions relative to the U.S. market if and when we feel there is enough clarity to make an informed opinion relative to the regulatory pathway requirements and general launch timelines.

Based on our 10-year DCF model, which uses a 13% discount rate to account for certain risks and uncertainties that CytoSorbents faces (several of which we detailed in our initiation report), the shares are valued at approximately $0.50. Our model and assumptions will be updated commensurate with news flow which could also influence the valuation. As it is now, we value the company at $0.50/share, implying upside to the current share price and reflecting our Outperform rating.

FINANCIAL MODEL

CytoSorbents Inc.

	2013 A	Q1A	Q2E	Q3E	Q4E	2014 E	2015 E	2016 E	2017 E
CytoSorb Sales	$821.8	$569.2	$688.0	$788.0	$988.0	$3,033.2	$13,110.0	$22,180.0	$30,090.0

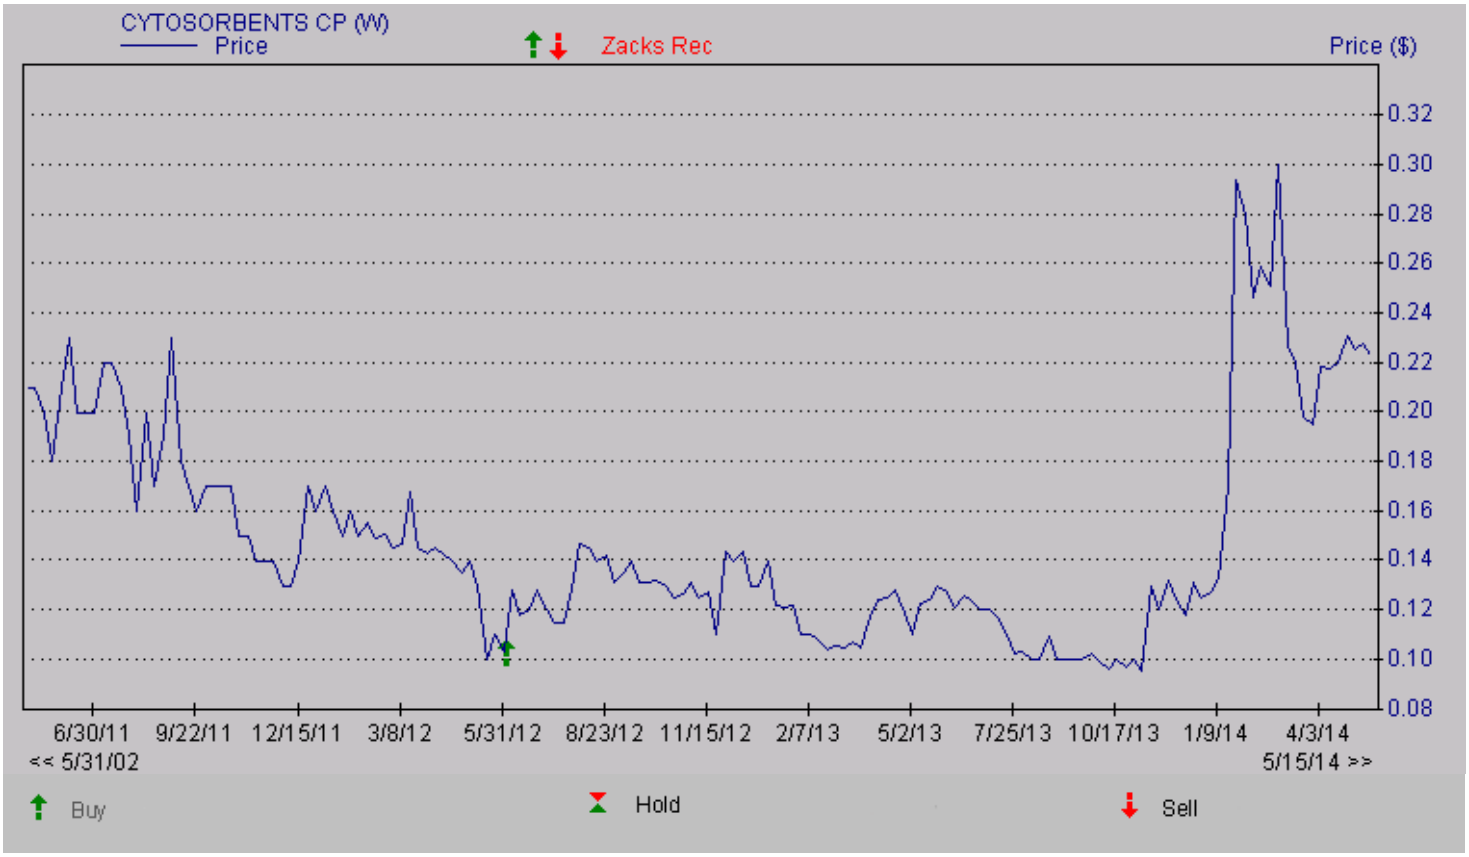
HISTORICAL ZACKS RECOMMENDATIONS



DISCLOSURES

The following disclosures relate to relationships between Zacks Small-Cap Research ("Zacks SCR"), a division of Zacks Investment Research ("ZIR"), and the issuers covered by the Zacks SCR Analysts in the Small-Cap Universe.

ANALYST DISCLOSURES

I, Brian Marckx, CFA, CFA, hereby certify that the view expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the recommendations or views expressed in this research report. I believe the information used for the creation of this report has been obtained from sources I considered to be reliable, but I can neither guarantee nor represent the completeness or accuracy of the information herewith. Such information and the opinions expressed are subject to change without notice.

INVESMENT BANKING, REFERRALS, AND FEES FOR SERVICE

Zacks SCR does not provide nor has received compensation for investment banking services on the securities covered in this report. Zacks SCR does not expect to receive compensation for investment banking services on the Small-Cap Universe. Zacks SCR may seek to provide referrals for a fee to investment banks. Zacks & Co., a separate legal entity from ZIR, is, among others, one of these investment banks. Referrals may include securities and issuers noted in this report. Zacks & Co. may have paid referral fees to Zacks SCR related to some of the securities and issuers noted in this report. From time to time, Zacks SCR pays investment banks, including Zacks & Co., a referral fee for research coverage.

Zacks SCR has received compensation for non-investment banking services on the Small-Cap Universe, and expects to receive additional compensation for non-investment banking services on the Small-Cap Universe, paid by issuers of securities covered by Zacks SCR Analysts. Non-investment banking services include investor relations services and software, financial database analysis, advertising services, brokerage services, advisory services, equity research, investment management, non-deal road shows, and attendance fees for conferences sponsored or co-sponsored by Zacks SCR. The fees for these services vary on a per client basis and are subject to the number of services contracted. Fees typically range between ten thousand and fifty thousand USD per annum.

POLICY DISCLOSURES

Zacks SCR Analysts are restricted from holding or trading securities placed on the ZIR, SCR, or Zacks & Co. restricted list, which may include issuers in the Small-Cap Universe. ZIR and Zacks SCR do not make a market in any security nor do they act as dealers in securities. Each Zacks SCR Analyst has full discretion on the rating and price target based on his or her own due diligence. Analysts are paid in part based on the overall profitability of Zacks SCR. Such profitability is derived from a variety of sources and includes payments received from issuers of

securities covered by Zacks SCR for services described above. No part of analyst compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in any report or article.

ADDITIONAL INFORMATION

Additional information is available upon request. Zacks SCR reports are based on data obtained from sources we believe to be reliable, but are not guaranteed as to be accurate nor do we purport to be complete. Because of individual objectives, this report should not be construed as advice designed to meet the particular investment needs of any investor. Any opinions expressed by Zacks SCR Analysts are subject to change without notice. Reports are not to be construed as an offer or solicitation of an offer to buy or sell the securities herein mentioned.

ZACKS RATING & RECOMMENDATION

ZIR uses the following rating system for the 1072 companies whose securities it covers, including securities covered by Zacks SCR:
Buy/Outperform: The analyst expects that the subject company will outperform the broader U.S. equity market over the next one to two quarters.
Hold/Neutral: The analyst expects that the company will perform in line with the broader U.S. equity market over the next one to two quarters.
Sell/Underperform: The analyst expects the company will underperform the broader U.S. Equity market over the next one to two quarters.

The current distribution is as follows: Buy/Outperform- 16.8%, Hold/Neutral- 76.4%, Sell/Underperform – 5.9%. Data is as of midnight on the business day immediately prior to this publication.
